All code and tests checked in, with reference to US#/Task#

All code pair programmed

All changed code refactored

All exception/error messages written with proper spelling and grammar

All HTML must be correctly formatted according to the W3C specification

Code compiled with no errors

Code follows accepted coding standards

New builds successfully passed in CI

CI server runs all tests

Shortcuts documented on the technical debt chart

Task status updated on the task board

Team wiki notes should be updated (as necessary) when tasks are complete

Tested code coverage to an acceptable level

Automated tests for exception & error cases

All checked in code includes unit testing

CSS validated

All tasks for the story are done

Acceptance criteria defined for story

Actions from past retrospectives have been implemented

Story is deployed to the staging environment

Acceptance criteria verification completed by team or story owner

Bug(s) reviewed (any existing bugs that apply?)

Code reviewed

Demonstrated the story to the Product Owner, and accepted that the story meets the acceptance criteria

User interface is according to our GUI standards / style guide

Code analysis meets minimum standards

No JAVA script errors

Any required database maintenance mechanisms have been tested and checked in

Provide list of tests available to others

Test cases reviewed

0 ignored unit test cases

0 priority 1 or 2 defects

All unused code and tests deleted

Automated Acceptance tests for all acceptance criteria

Completed testing and passes

1. Unit

2. Integration

3. Functional

4. UAT

Database tuning completed

Story functionalities integrated with existing functionalities

Configuration changes tracked

Performance testing completed

Install/upgrade scripts, deployment document, & programs are completed, checked in, and tested

Release notes, installation, user guides, environment requirements are documented, published, and checked in

System level tests are complete and passing

The Product Owner has accepted the release

Users are using the system

Application / database tuning done

OS level tuning done

Stress, Bandwidth, Load testing completed

A working and stable build and release environment has been built

Deployed to production

Included stories have been demonstrated to a larger audience
